

MOCHI rzmong RZ-78 – mecha model-kit style decal sheet

case_luar_lcd_23_40mm_smooth_v3 · A4 · scale 1:1 · CLEAR vinyl (no white ink; white case only)
Original fan design inspired by generic mecha model-kit decals – no official logos or trademarks; all codes (RZ-78, R.Z.M.F.) are invented.

PRINT AT 100 % / "ACTUAL SIZE" (no "fit to page"). The bar must measure 50 mm.

VARIAN PCB CARRIER · case_luar_lcd_23_40mm_pcb.stl · potongan -P bebas grille speaker & slot saklar

NOTES · Numbers = placement-guide keys (placement_guide.png / STICKER_GUIDE.md). L = LEFT (+X), R = RIGHT (-X) seen from behind; the screen side is the FRONT. "spare" = extra copy.
Material: WHITE gloss printable vinyl (primary) + clear gloss laminate, or white waterslide decal paper + clear coat. Clear vinyl has NO white: white text/margins become see-through (white case only).
Solid pieces (blue/red/yellow/black) print 0.5 mm bleed past the cut; floating decals (emblem, marking block, shield, extras) keep a 0.3 mm white margin. Labels and notes are printed, not cut.
Curved areas: V-fin 15 sits on the gently curved visor top (pre-flattened); dome tri-stripe 16a-d is segmented – butt the segments on the centre line, or use the single ALT stripes 17B/17C. Warm vinyl on curves.

VARIAN PCB CARRIER untuk case_luar_lcd_23_40mm_pcb.stl + tatakan_GMT130_fit_pcb.stl

Potongan bertanda -P sudah dipotong ulang supaya tidak menutup grille speaker di atas (15 lubang Ø1.5) dan slot saklar + counterbore di dinding belakang (jarak bebas ±1 mm).
Ventilasi -P lebih pendek (rear end berhenti ±1 mm sebelum lubang grille), strip kubah belakang -P mulai di belakang grille, thruster pod +X -P punya takik untuk saklar.
Pod/panel lain sama persis dengan set asli. Spare di bawah ini untuk pod sisi +X (kiri mobil). Jangan tempel tambahan (21) di atas grille atau slot saklar.

10L-P spare +X
